

## Setup Instruction A-tent

1. The tent has to be outstretched on the ground so that you can see the footprint in front of you.  
e. g. 3 m length; 2.5 m width
2. Now all the 4 straps at the edges of the tent have to be anchored with pegs to the ground.
3. Now insert the leverage (1x ridgepole and 2 x setting up poles) into the tent.
4. Now the ridgepole has to be forced up with the setting up poles and has to be connected with them. After this the tent will be upright on its own.
5. All the ground straps have to be endued with pegs and anchored. Afterwards you have to retighten the tent once more.

### **Notice:**

After using the tent please dry it – only pack when totally dry.  
With longer storage wrap the tent carefully because mice love tents.
