

Construction tipi poles

- If you want to build your own tipi poles, you need the wood of spruce, pine or bamboo
- It is very important to keep the top of the tree
- You have to peel and plane the poles very neatly; otherwise it would damage the tent
- Please let dry the poles (ca. 3 weeks)
- You will need poles for the scaffolding and two for the smoke flaps

For example:

If you have a 4m tipi:

- 13 poles with a length of 6metres
- Ø at the bottom: 6 – 7 cm
- Ø at the top: ca. 3 cm

If you have a tent of 8 metres (26 feet), you need at least 17 poles, which have a lengths of 9,5-10 metres (31 – 32 feet)

Ø at the bottom: 8-10 cm (3,15 – 3,94 inches)

Ø at the top: ca. 4 cm (1,56 inch)
